

# ***Going Green?***

# Going LEED?

LEED is the buzz-word for  
Green Building:

Leadership in Energy and  
Environmental Design  
Green Building Rating System

Created by the  
US Green Building Council

“Green” sounds great!  
it gets everyone on board.

but,

**Sustainability**  
is what we’re really after!

Some current players include:

# E3: Energy, Environment & Economics

solar wall

LED lighting

high efficiency glazing

wipe off mat

heat pump

LED down lights

LED lights with light pipes and  
dimming control

The incandescent lamps shipped with the hood had to go!

LED light bars

daylighting in  
the restrooms

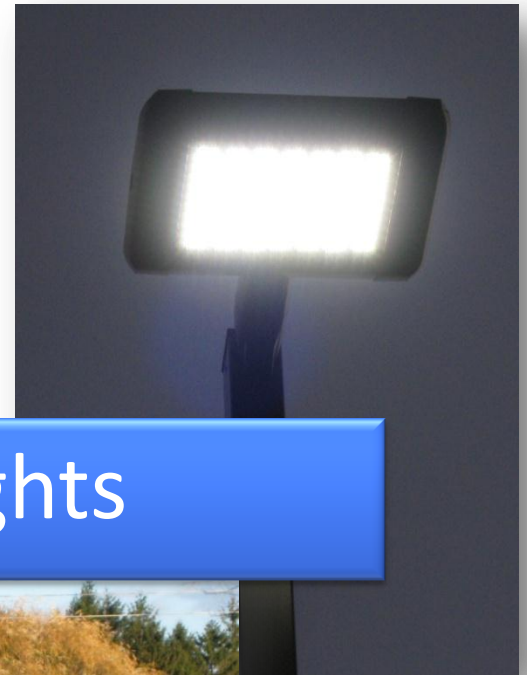

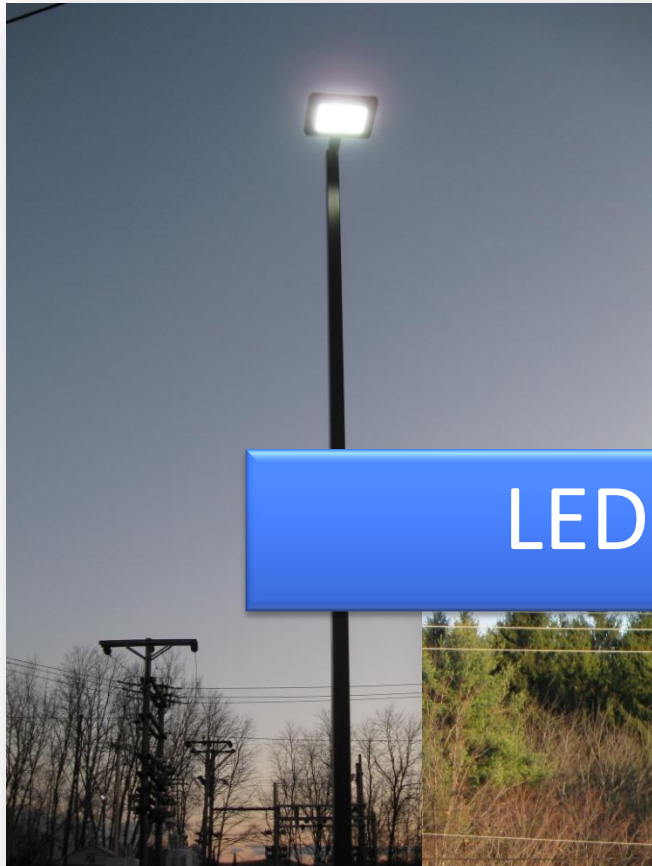

## Water saving fixtures

## LED parking lot lights

LED “neon” and  
signage

**KFC**

# LED menu board

so much to chew from

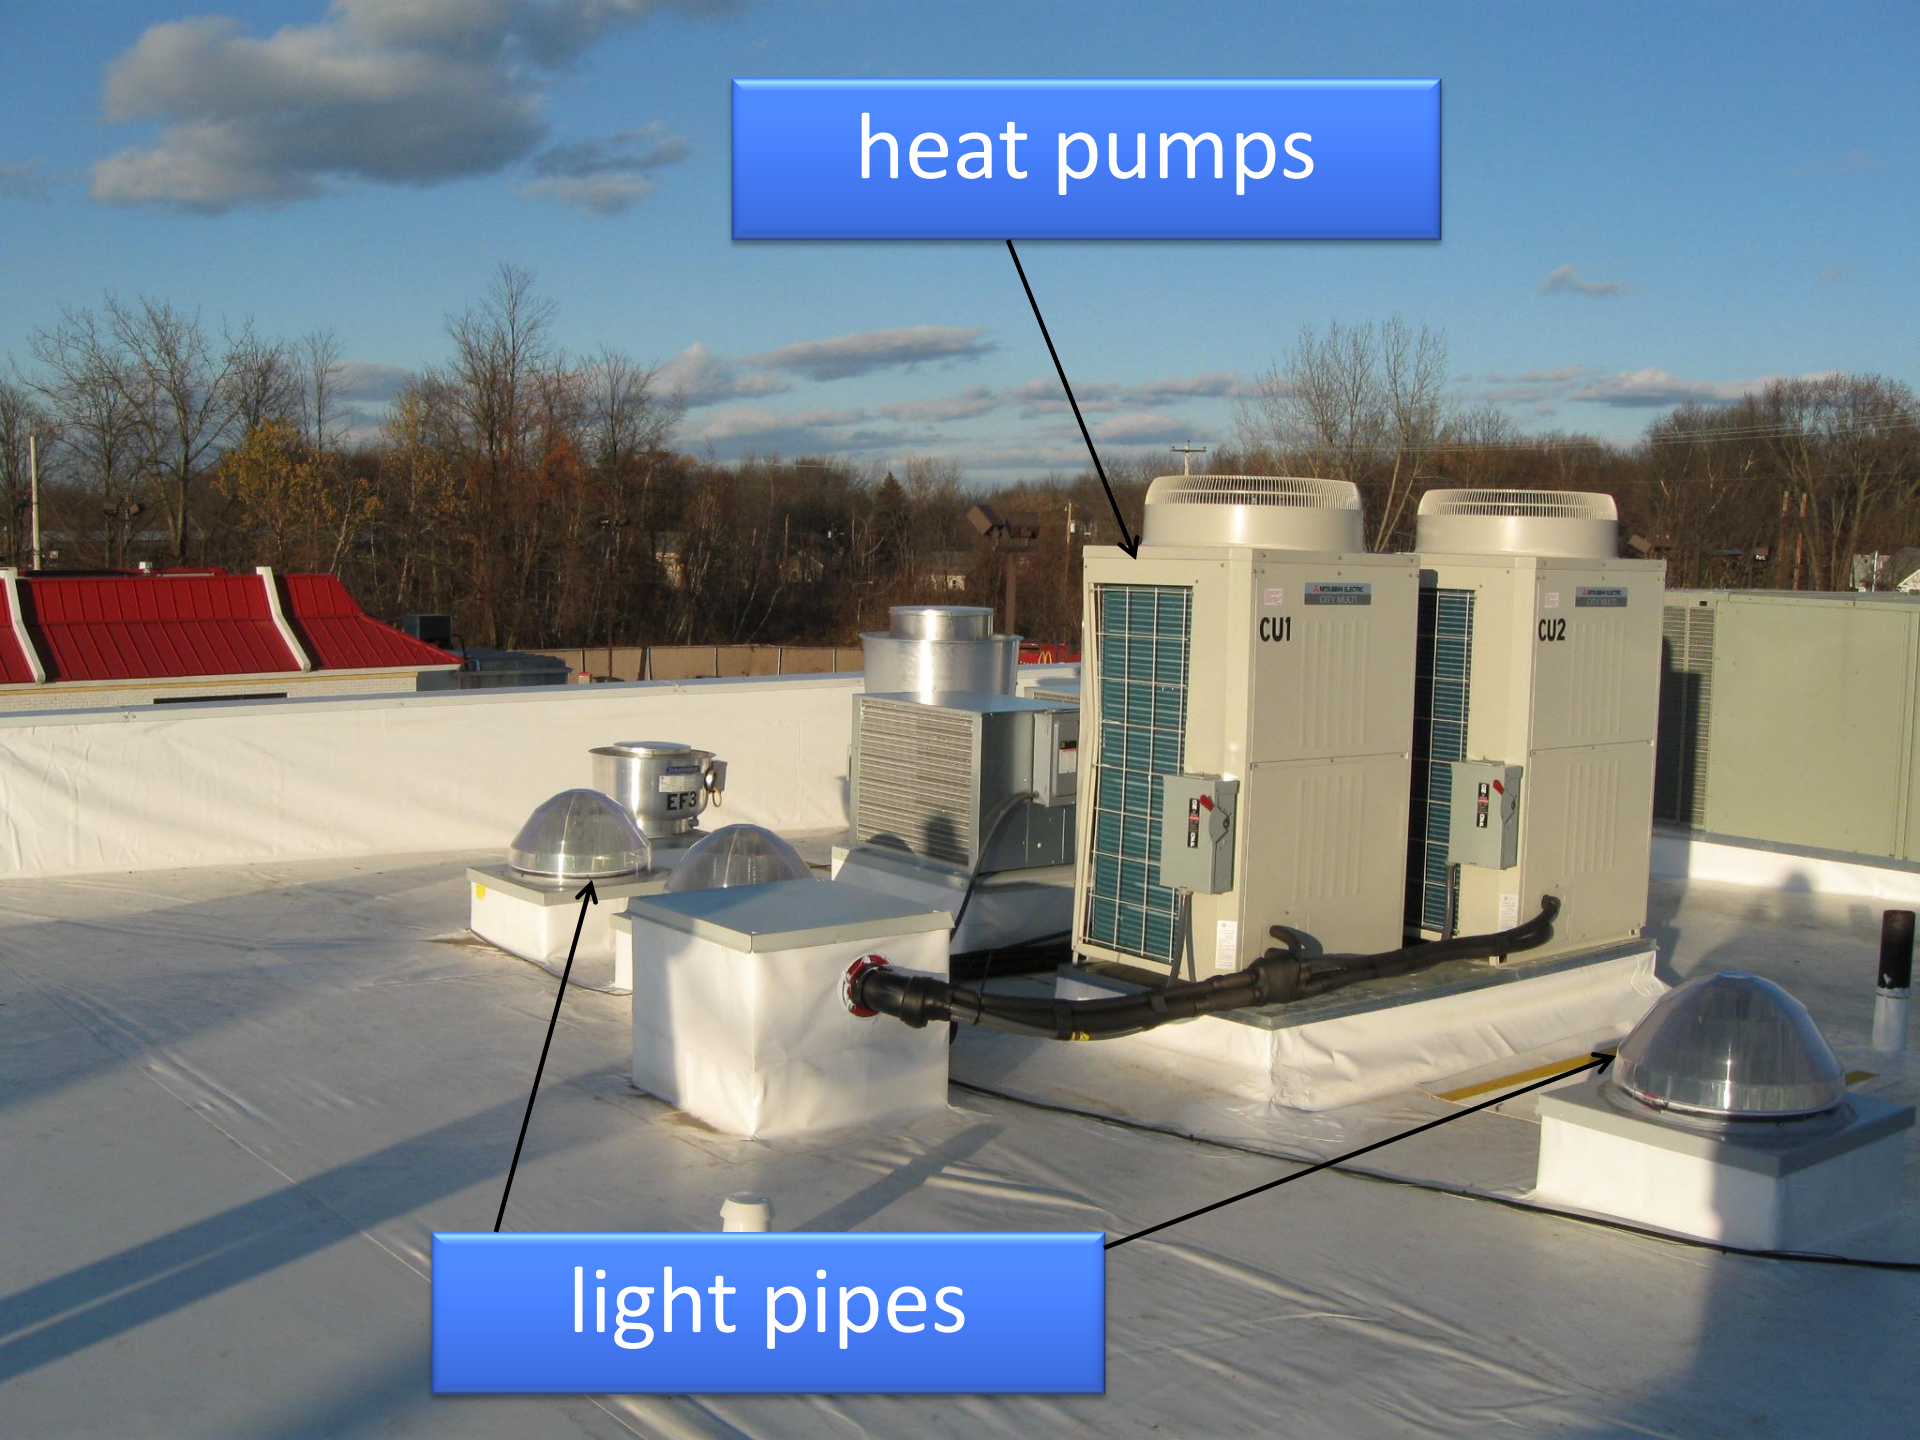

LED light bar

heat pumps

light pipes

storm water recovery

High-efficiency hot water

# Energy Features:

- solar wall for preheating air
- high efficiency HVAC
- LED lighting, daylighting and controls
- **efficient appliances and kitchen ventilation**
- high efficiency hot water heater
- advanced glazing
- cool roof
- Renewable energy credits

30% Design  
Airflow  
Reduction  
and  
variable  
speed

Consumer education

# *Take Home for Sustainability:*

- Top Down Commitment
- Plan & implement a sustainable program (culture change)
- Energy accounting, benchmarking & tracking
- Develop & Implement Menu of Efficiency Measures (retrofit and new design)
- Approach the process step-by-step.
- Promote your Green Efforts!

*Give a Hoot!*

**be  
energy  
wise**

**save energy, save money,  
save the environment.**
